Fast 30 years Medical College named after V.I.Vernadskii prepares low-grade medical workers and pays attention to modern approaches and requirements.

History

Medical College was established in 1987 as structural subdivision of Crimea State Medical University named after S.I.Georgievskii. The first department „Nursing care” was opened on the base Medical (specialized) school». Since 1992 the profession „Orthopedic stomatology”, which prepares the specialists in qualification „dentalprothetist”.

In 2000, Medical College got license for preparing of nurse- Bachelor. In 2002 department, Pharmacy” was opened, which prepares the specialists of low-grade medical workers in different fields of pharmaceutical branch. In 2010, the postgraduate education department of specialists of low-grade medical workers was opened. It improves the preparing of nurses, dental mechanic and pharmacists.

In January 2015, Medical College is the part of Crimea Federal University named after V.I.Vernadskii as structural subdivision.

Direction of preparing

The main goals of College are to satisfy the benefits of society with the specialists in low-grade medical education, to prepare good educational programs in low-grade and postgraduate professional education. It is important to form civic stand and diligence, developing of responsibility, self-support and creative activity by the students.

Nowadays, Medical College makes educational activity in three programs of low-grade professional education. These are Nursing care, Pharmacy, dentalprothetist and Postgraduate professional education.

One of the priority direction of education at Medical College is to prepare junior and low-grade staff in Nursing care. Nursing care is one of the part in Health System and it is busy with improving a health of population, preventing diseases.

Providing psychosocial aid, caring of people who have mental and physical disorders and disabled people. The graduate, who masters basic professional educational program of SSE (Secondary special education) in NURSING CARE, he or she owns the technique of making medical procedures, knows the names and administration of remedies, the rules and methods of disinfection, the rules of given injections, knowing ethics and deontology, branches medical and pedagogical psychology. The polyclinics, hospital, medical centers and health resorts are the places where the graduates can work. Moreover, it is not full list, where the graduates can use their knowledge and skills.

Pharmaceutical direction of education in Medical College prepares high skilled. Many branches of drug stores need new pharmacists. The studying of complex scientific-practical disciplines make up the educational process. It relates to creation, safety, researching, storing, and preparing selling and marketing medications. It needs for researching of natural sources of medicinal substances. According to qualification of graduates, they own knowledge of herbal facilities and goods of medical prescription, they can consult the customers in remedies and facilities of pharmaceutical choices, and they have such features as responsibility, firmness of purpose, diligence, self-sufficiency.

In department „Dentalprothetist” is taught how to do dentures, orthodontic and maxillofacial device. The students have fine motor skills, accurate, like hand work, observant, high concentration of attention (great focus), good memory, physical and mental endurance. They have such features as sensitivity, empathy and attentiveness to people. The dentalprothetist renders aid orthopedic aid to population; prepare different kinds of crowns, pivot crown, prosthetic bridge, dentures, braces and other orthopedic and orthodontic constructions. It is very popular direction to use the skills in this profession.

Every year the department Postgraduate professional education of Medical College makes the cycles of refresher training in Health System of medical workers who have low-grade medical and pharmaceutical education.

College takes part in international communication of CFU and with foreign organization, facilities and institutions.

The pride of our College is the right to make special exam for people who had studying in foreign countries but they would like to work in medical institutions of Russia Federation.

The teaching staff of College has large experience of work in medical constitution. Many of them came to College from practical medicine with experience in hospitals. By the way, these people adore their work, they know their subject properly and can arouse interest by any students. Being a part of professor-teaching staff of CFU in educational process can help efficacy to apply in

educational program the new science and technique, to use innovative pedagogical technology and methods of education. Our teaching staff constantly improve its professional skills.

Practice

The educational and practical training in Medical College is on the base of Healthcare facilities. It helps to get maximum full representing about studying discipline and possibilities of progressing their career. Practical classes are in special studies of College and in medical and preventive treatment facilities, which conform the profile of educational training of preclinical and phantom course. Practical training and Pre-graduation practice is in medical and preventive treatment facilities across the Crimea.

Societies

The societies are organized for deeper studying of choosing profession in Medical College. These are Nursing Care in Clinical medicine (pediatry, therapy, surgery, obstetrics and gynecology), orthopedic stomatology and pharmacy.
